KATSA

Katsa – Geared for You

Reverse engineering and spare-part manufacturing

Katsa's reverse engineering can either be a modelling or re-designing of a single gear component or part of complete gearbox refurbishment.

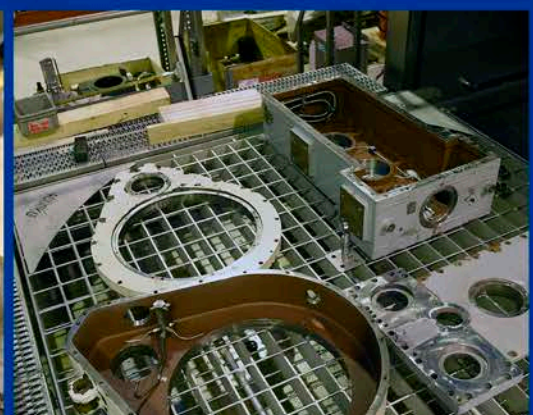

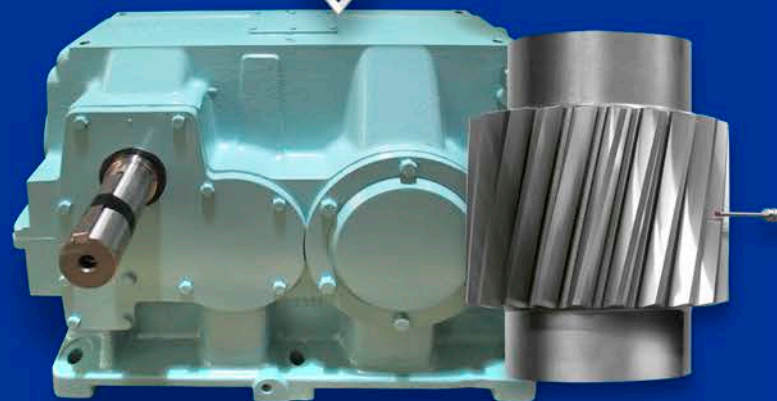

Full in-house manufacturing & inspection capabilities ensures quick spare-part deliveries whenever needed.

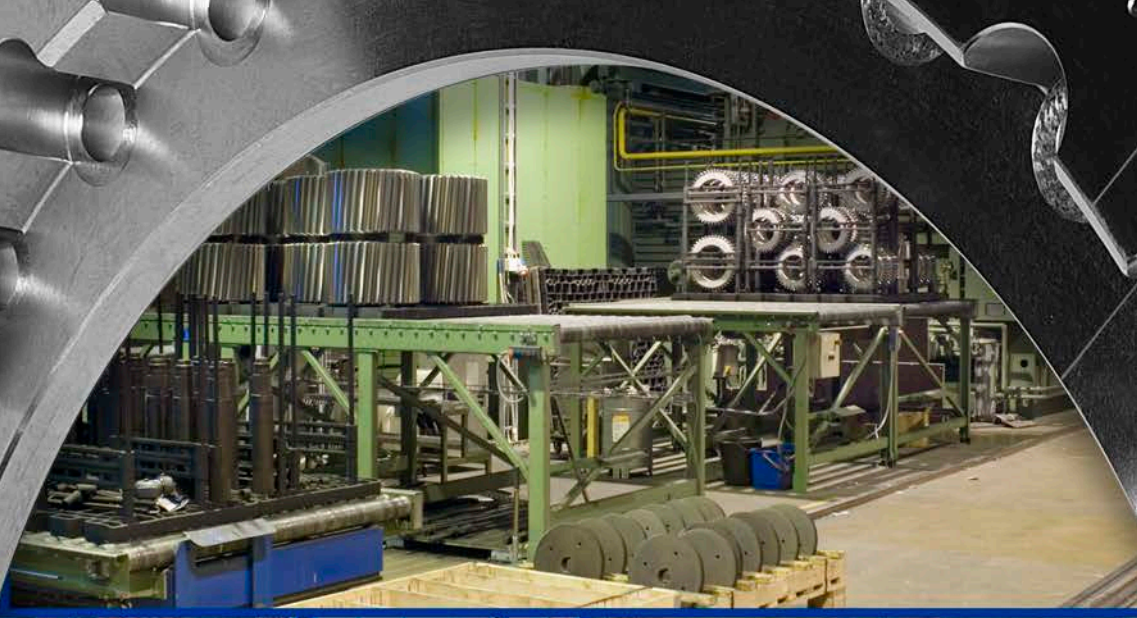

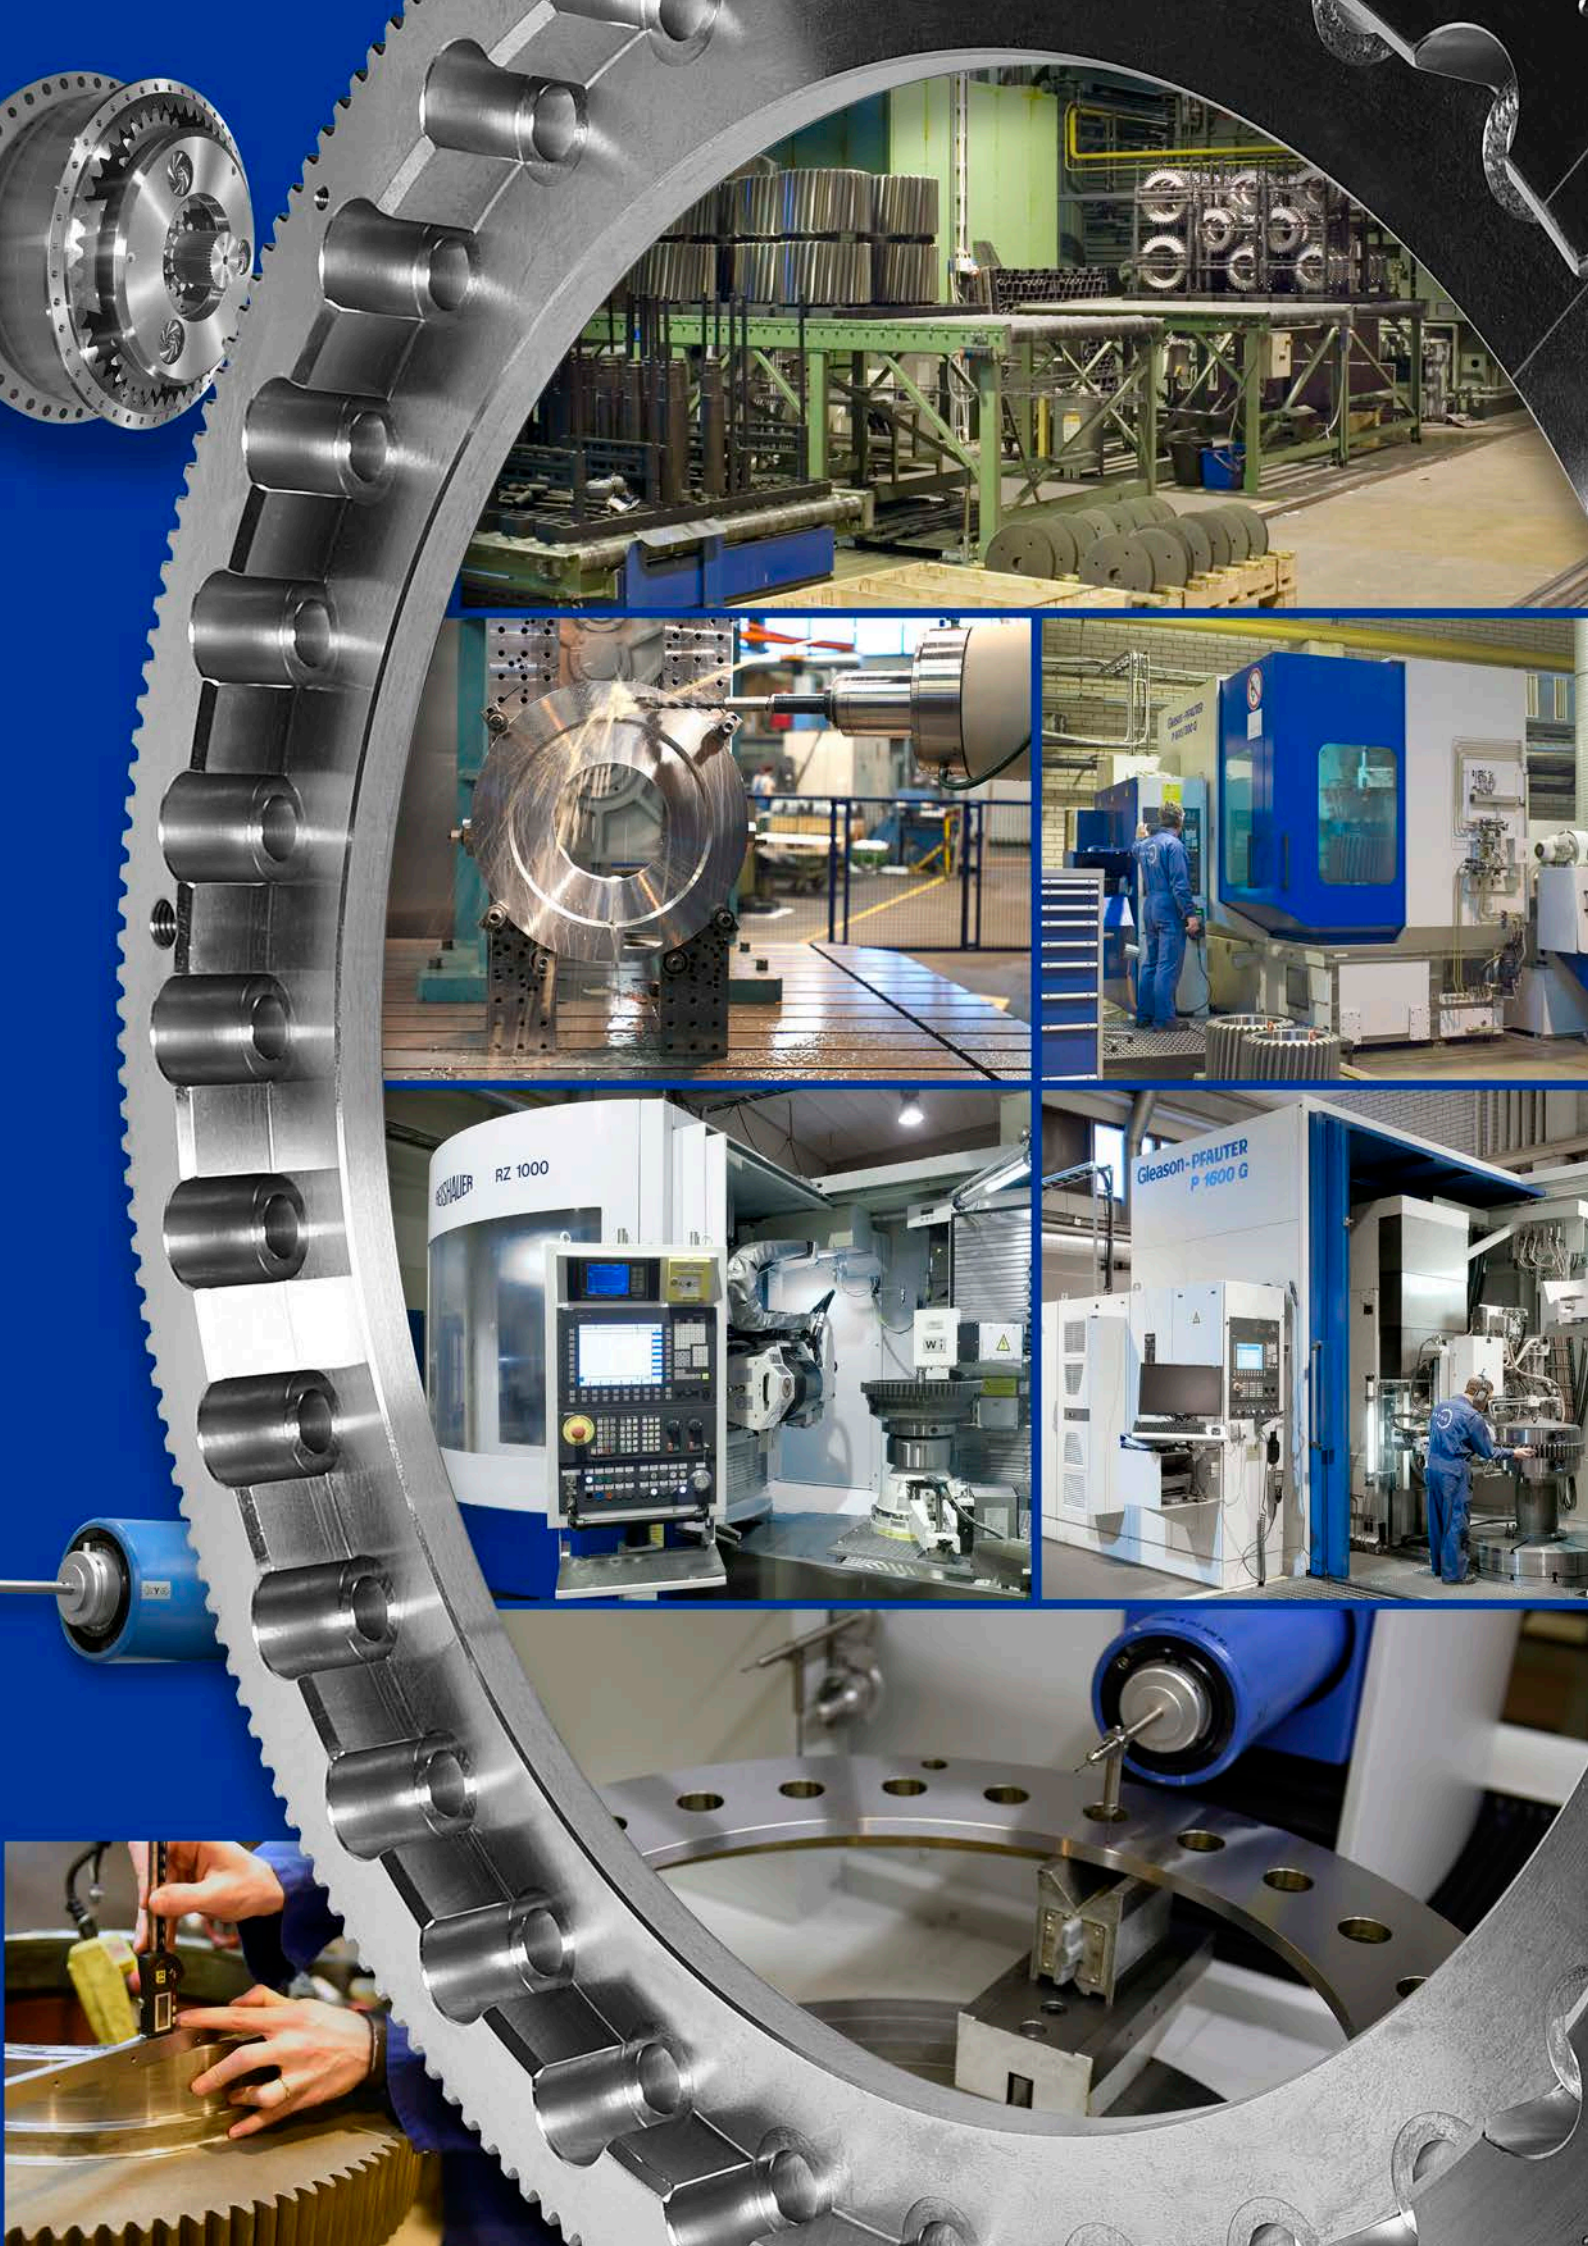

Katsa's gearbox refurbishment brings you cost benefits and is a sustainable option comparing to a new-built gearbox as only required parts are replaced.

Gear component reverse engineering and re-designing:

1. Indicative pricing based on photographs and basic dimensions
2. Old component delivery to Katsa service workshop
3. Katsa's official offer
4. Reverse engineering
5. Manufacturing at Katsa's factory
6. Delivery

On-site reverse engineering also during maintenance breaks at the factory!

Katsa – Geared for You

Katsa Oy designs and manufactures power transmission components. Katsa is a supplier of special gear units which are tailored to meet the customer's demands. For end users, Katsa provides modelling, modernisation, gearbox repair and maintenance services as well as spare parts. Moreover, Katsa manufactures a range of toothed components as single batches and in serial production.
